

NEW CONSTRUCTION

Over \$25 Million

PROJECT

AHN Allegheny General Hospital
Academic Cancer Center

CONTRACTOR

Massaro Corporation

"Massaro Corporation encountered many difficult challenges throughout construction, including the occupied healthcare environment on three sides of the project site that housed extremely sensitive equipment and medical care. Another issue was the Trauma/Heliport directly in line and adjacent to the project delayed construction progress often ten times or more a day. Further, the shoring system planned for the northern corner of the site required a total system change to accommodate an undocumented 480V line. These challenges and many others were quickly and successfully dealt with by the construction team. At a point when the project was advancing significantly, the most difficult challenge presented itself; COVID-19. Massaro demonstrated great leadership and innovation when they jumped into quick action by working with the entire team to create safety work standards before the state mandates were enacted. Their effective communication, proactive ability to problem-solve, and commitment to safety demonstrated the knowledge and determination to successfully complete the complex and vital addition to the hospital."
